I'm a solution oriented Full Stack and Python developer. I love to learn new stuff on my free time, and I enjoy working in web development because of the satisfaction that I get by overcoming challenges and designing pretty websites. I'm motivated by the idea of working on software that may help someone life for the better.

SKILLS AND TECHNOLOGIES

Javascript, Typescript, Python, React, Tailwind CSS, Sass, Express, MERN Stack, MongoDB, SQL, MySQL, Git, JSON Parsing, RESTful APIs, Postman, SEO Optimization, Object-oriented Programming, Debugging

PERSONAL PROJECTS

Trailer Paradise
- Built back-end with proper MVC structure that serves a custom RESTful API of trailer objects from a MongoDB database.
- Designed and created responsive and mobile friendly front-end website that uses the custom RESTful API from the back-end to present users with a YouTube video of the trailers using the YouTube API.
- Optimize code to reduce project build time by 32%.

Data Visualizer
- Designed and developed graphical interface with flexibility and scalability in mind for a "it just works" approach.
- Optimize filter, and search functions to run 56% faster with the use of dictionaries and proper python conventions.
- Developed with OS compatibility in mind that allows it to work on Windows, MacOs, and Linux machines.
- Published on PyPi and ready to be downloaded with Python's package installer PIP.

YouTer
- Designed and developed user-friendly terminal GUI wrapper for youtube-dl that allows users to download YouTube videos easier.
- OS-friendly and compatible with Linux, MacOs, and Windows machines.
- Published on PyPi and ready to be downloaded with python's package installer PIP.
